

- Proeon is a Specialist Systems Integrator operating primarily in the energy sector
- Consulting, developing, manufacturing and servicing of control and safety systems
- A very fast growing and successful company
- www.proeon.com

Through creating intelligent, innovative control systems, Proeon has become a leading Norfolk success story.

In the last three years Proeon has grown significantly from a simple lifestyle supporting company for the Directors, to a multi-million pound business employing over 30 specialists with an active recruitment program to accommodate their current growth plans. The company is a specialist systems integrator that uses electronic and electrical engineering combined with software development to create innovative solutions that vary from bespoke Gas Turbine control systems through to integrated fire detection and suppression systems with a wide range of client driven turnkey solutions, consultancy, R&D and service activities to ensure that control and safety systems are operating correctly.

The company was initially focused on the energy sector and located in Norfolk because of proximity to the Southern North Sea; but now operates across the World. It is developing new markets working with high end motorsport and household brand food businesses, also based in Norfolk, providing software and systems to increase efficiency and productivity.

Dr. Dorian Hindmarsh, the Business Development Manager, commented that the company had been successful because of the services offered and where it was based. "There is a major cluster of energy businesses based in Norfolk and we are an active member of the East of England Energy Group, which has helped us. We are able to find and retain the skilled and capable software and

control engineers we need to grow and sustain, and there is the obvious attraction of the quality of life here in Norfolk. We actively engage with the University of East Anglia and this year our graduate scheme has included a graduate from the school of environmental studies".

"Norfolk works really well for us as a location. We use the airport on a near weekly basis either up to Aberdeen or flying globally via Amsterdam. And when compared to London or Aberdeen (where we have an outpost), the operating costs are significantly lower. We get very good support from the public sector and have received growth funding from the New Anglia LEP and support from both the County and District Councils to help with our expansion and growth".

"We are so successful because of what we offer, the skills of our people and where we are based. Norfolk is a great place for business in the 21st Century as well as being a nice place to live".

Dr. Dorian Hindmarsh, Business Development Manager
